In the Claims:

Please cancel all claims namely claims 48-105 and replace with the following claims 1-25:

1. A multiple warning signal light for use with a motorized vehicle, the multiple warning signal light comprising:

a) a light support having a front side with a first visible exterior surface;

b) a plurality of light emitting diodes arranged about and attached to the first visible exterior surface;

c) a controller in electric communication with the light emitting diodes, the controller constructed and arranged to activate the light emitting diodes thereby producing at least two different types of visually distinct warning light signals wherein the at least two different types of visually distinct warning light signals are produced simultaneously, said light emitting diodes receiving power from a power source; and

d) a gyrator attached to the light support, the gyrator constructed and arranged to move the warning signal light with respect to said vehicle.

2. The multiple warning signal light of claim 1, said light support further comprising a back side with a second visible exterior surface having a plurality of light emitting diodes arranged about and attached to the second visible exterior surface.

3. The multiple warning signal light of claim 2, wherein the controller controls the light emitting diodes on the first visible exterior surface and the second visible exterior surface for the provision of a different warning light signal on the first visible exterior surface and the second visible exterior surface.

4. The multiple warning signal light of claim 3, said plurality of light emitting diodes comprising light emitting diodes of at least two different colors.

5. The multiple warning signal light of claim 4, the controller activating the light emitting diodes to create at least one of a single colored warning light signal and at least one of a multi-colored warning light signal.

6. The multiple warning signal light of claim 3, wherein the warning light signal is in the form of a directional indicator.

7. The multiple warning signal light of claim 3, wherein said motorized vehicle is a utility vehicle.

8. The multiple warning signal light of claim 3, wherein said motorized vehicle is an emergency vehicle.

9. A multiple warning signal light for use with a motorized vehicle, the multiple warning signal light comprising:

a) a light support having a front side having a first visible exterior surface;

b) a plurality of light emitting diodes arranged about and attached to the first visible exterior surface;

c) a controller in electric communication with the light emitting diodes, the controller constructed and arranged to activate the light emitting diodes thereby producing at least two different types of visually distinct warning light signals wherein the at least two different types of visually distinct warning light signals are produced in at least one combination, said light emitting diodes receiving power from a power source; and

d) a gyrator attached to the light support, the gyrator constructed and arranged to move the warning signal light with respect to said motorized vehicle.

10. The multiple warning light signal according to claim 9, said light support further comprising a back side having a second visible exterior surface having a plurality of light emitting diodes arranged about and attached to the second visible exterior surface.

11. The multiple warning signal light of claim 10, wherein the controller controls the light emitting diodes on the first visible exterior surface and the second visible exterior surface for the provision of a different warning light signal on the first visible exterior surface and the second visible exterior surface.

12. The multiple warning signal light of claim 11, said plurality of light emitting diodes comprising light emitting diodes of at least two different colors.

13. The multiple warning signal light of claim 12, the controller activating the light emitting diodes to create at least one of a single colored warning light signal and at least one of a multi-colored warning light signal.

14. A multiple warning signal light for use with a motorized vehicle, the multiple warning signal light comprising:

a) a light support having a front side having a first visible exterior surface;

b) a plurality of light emitting diodes arranged about and attached to the first visible exterior surface, said light emitting diodes receiving power from a power source;

c) a controller in electric communication with the light emitting diodes, the controller constructed and arranged to activate the light emitting diodes thereby producing at least two different types of visually distinct warning light signals, wherein the at least two different types of visually distinct warning light signals are produced in at least one combination; and

d) a gyrator attached to the light support, the gyrator constructed and arranged to move the warning signal light relative to the light support.

15. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated simultaneously in any combination.

16. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated alternatively in any combination.

17. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated in a regular pattern.

18. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated in an intermittent pattern.

19. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated in an irregular pattern.

20. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated in a regular sequence.

21. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated in an intermittent sequence.

22. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated in an irregular sequence.

23. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated at regular intervals.

24. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated at intermittent intervals.

25. The multiple warning signal light of claim 14, wherein the at least two visually distinct warning light signals are generated at irregular intervals.
